EDUCATION

Ballari Institute of Technology and Management 2025 – 2029 *B.E. in Computer Science and Engineering (Data Science)* **CGPA: 8.28**

TECHNICAL SKILLS

Programming Languages: C, C++, Python

Office & Productivity Tools: MS Office, MS Excel, MS PowerPoint

CERTIFICATIONS

- Certification in C
- Excelled in MS Office, MS Excel, and MS PowerPoint

PROJECTS

Innovation and Design Thinking – Line Follower Robot

- Designed and developed an autonomous line follower robot that follows a predefined path using sensors.
- Used IR sensors to detect the line and a microcontroller to process sensor signals and control the motors.
- Applied innovation and design thinking principles to identify the problem, develop a prototype, test the system, and improve its performance.

Music Playlist Management System

- Developed a Python application for creating, organizing, and managing custom music playlists.
- Implemented features for adding new tracks, deleting songs, viewing playlist details, and searching songs by genre or artist.
- Utilized Python data structures (lists and dictionaries), custom functions, conditional logic, and control loops to handle track management.

Customer Billing System

- Developed a C-based menu-driven application for managing customer details and generating bills.
- Implemented features to add customer information, enter purchased products, calculate total amounts, and generate billing details.
- Used C structures, arrays, functions, conditional statements, and loops to efficiently manage customer and billing information.

Calendar Application in C

- Developed a console-based C application to display monthly and annual calendar layouts with accurate day-of-week calculations.
- Incorporated Zeller's congruence algorithm and leap-year logic for exact date computation across any given year.
- Implemented interactive menu navigation allowing users to view specific months, navigate years, and add basic personal reminders/events.
